

What is claimed is:

1        1. A rear grip apparatus for a personal watercraft wherein a seat is placed on a deck and a  
2        rear grip, which can be grasped by a passenger, is disposed rearwardly of said seat, characterized  
3        in that

4                said rear grip includes a body member of a U-shaped section or an H-shaped section having  
5                a sculpted recessed portion opening upwardly, and a grip face member in the form of a cover for  
6                being fitted on said sculpted recess from above; and

7                said body member and said grip face member are both molded articles of a resin.

1        2. A rear grip apparatus for a personal watercraft according to claim 1, characterized in that  
2        said grip face member is a product of an injection molding process, and has non-slip textured  
3        irregularities formed at a portion thereof.
